

FCC ID: 2AAP8G002H

According to KDB 447498 D01 General RF Exposure Guidance v06, section 4.3.1

At 100 MHz to 6 GHz and for test separation distances ≤ 50 mm, the SAR test exclusion threshold is determined according to the following

 $x [\sqrt{f(GHz)}] \le 3.0$

1. SAR test exclusion threshold

Frequency: 2 402MHz (min. separation distances = 5 mm)

SAR test exclusion thresholds (5 mm) = 3 x 5 / ($\sqrt{2.402}$) = 9.678mW

Max. Tune-up Tolerance	SAR Test Exclusion Thresholds
(mW)	(5mm) (mW)
1	9.525

Calculation Value: 1 (mW) / 5 (mm) x $\sqrt{2.402} = 0.310$

So, Calculation value ≤ 3.0

Remark:

- -Max. conducted power 0.63 (mW) is closet 1 (mW), so 1 (mW) was calculated.
- -When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
